

Paymenter Customization and Development Project

Objective

Develop a commercial platform based on **Paymenter**, transforming it into a complete solution for service sales, billing, customer support, and automated service provisioning.

The project should prioritize Paymenter's native architecture, avoiding direct modifications to the core application whenever possible in order to preserve compatibility with future updates.

All development must be carried out in the company's private Git repository, with full delivery of the source code and technical documentation.

Project Scope

1. Deployment

The freelancer shall deliver:

- Complete installation of the environment on Debian 13 or Ubuntu Server LTS.
 - Automated installation and configuration script.
 - Configuration of HTTPS, database, queues, scheduled tasks, and backups.
 - Complete documentation covering installation, updates, backup, and restoration procedures.
-

2. User Interface Customization

Develop a new visual identity for:

Client Area

- Modern, responsive interface.
- User experience similar to WHMCS.
- Simplified dashboard.
- Intuitive navigation.
- Full compatibility with desktop, tablet, and mobile devices.

Administrative Area

- Interface optimized for daily operations.
 - Improved organization of clients, products, services, payments, and support tickets.
 - Administrative dashboard with operational metrics.
-

3. Support Ticket System

Customize the support ticket system to provide an experience similar to WHMCS.

The system should support:

- Departments
 - Priorities
 - Quick replies
 - Internal notes
 - Attachments
 - Service association
 - Permission-based access
 - Automatic notifications
-

4. Payment Gateways

Configuration

- Stripe
- Cryptomus

Development

- CoinPayments
- Binance (using official APIs only)

All payment modules must support:

- Automatic payment processing
 - Webhooks
 - Signature validation
 - Idempotency
 - Logging
 - Error handling
 - Protection against duplicate payments
-

5. Country-Based Payment Gateways

Develop a mechanism that allows different payment gateways to be available based on:

- Customer country
- Product
- Product group
- Customer type
- Currency
- Invoice amount

These rules must be enforced on the backend.

6. Payment Method Fees

Develop a module that allows charging additional fees based on the selected payment gateway.

The module must support:

- Fixed fee
- Percentage fee
- Fixed fee plus percentage
- Rules by country
- Rules by currency
- Rules by product
- Rules by customer

All fee calculations must be performed exclusively on the server.

7. Service Provisioning

Each product may optionally be associated with a provisioning module.

Provisioning modules should support, when applicable:

- Create
- Activate
- Suspend
- Unsuspend
- Cancel
- Renew
- Upgrade
- Downgrade
- Synchronization
- Status lookup

All operations must include protection against duplicate execution.

8. proxyPanel Module Conversion

Convert the existing WHMCS proxyPanel module into a native Paymenter module.

The new module should support:

- Automatic service provisioning
- Suspension
- Reactivation

- Cancellation
 - Renewal
 - Synchronization
 - Status lookup
 - Plan configuration
 - Location selection
 - Protocol selection
 - Quantity configuration
 - Logging
 - Error handling
 - Queue support
 - Operation retry
-

9. Brazilian Customer Registration

Add support for Brazilian customers.

Individual

- CPF
- RG

Business

- Company Name
- Trade Name
- CNPJ
- State Registration Number
- State Registration Exempt option

Implement CPF and CNPJ validation, input masks, secure storage, and access control for sensitive documents.

10. Disable Domain Sales

The company does not sell domain names.

All domain-related functionality must be permanently disabled without affecting future Paymenter upgrades.

11. Notification System

Implement a centralized notification system supporting:

- Email
- Telegram

Notifications must be available for both customers and administrators.

Minimum supported events:

- Payments
- Support tickets
- Service provisioning
- Service suspension
- Service cancellation
- Critical failures
- Webhooks
- Administrative changes

Notifications must be processed through queues and include automatic retry mechanisms.

12. Security

All development must follow industry best practices for application security.

Including:

- Secure credential storage
- Webhook validation
- Protection against duplicate operations
- Permission-based access control
- Audit logging
- Protection against sensitive information disclosure

No credentials, API keys, or secrets may be hardcoded into the source code.

Required Documentation

The freelancer shall provide complete documentation covering:

- Installation
- Configuration
- Updates
- Backup
- Restoration
- Module installation
- Theme installation
- Payment gateway configuration
- Provisioning configuration
- Notification configuration
- Troubleshooting

Each custom-developed module must include its own documentation.

Deliverables

Upon completion, the freelancer shall deliver:

- Complete source code
 - Automated installation script
 - Technical documentation
 - Customized client area
 - Customized administrative area
 - Customized support ticket system
 - Configured Stripe integration
 - Configured Cryptomus integration
 - CoinPayments payment gateway
 - Binance payment gateway (when supported by an official API)
 - Payment fee module
 - Country-based payment gateway selection
 - Converted proxyPanel module
 - Brazilian customer registration support
 - Email and Telegram notification system
 - Complete removal of domain sales functionality
 - Functional testing
 - Updated private Git repository
-

Freelancer Requirements

Experience in the following technologies is highly desirable:

- PHP 8+
- Laravel
- Paymenter
- WHMCS
- REST APIs
- Payment gateway integrations
- Cryptocurrency payment systems
- Webhooks
- Automated service provisioning
- Git
- Module development

All custom-developed source code shall become the property of the contracting company and must be delivered in full, together with complete documentation and maintenance instructions.
